Carbon

The presence of Carbon/Graphite product is rapidly spreading out especially in the 21st century.

Its good properties of high electric conductivity, anti-corrosiveness, and self-surface sliding came up to bring every sort of related product in the vast majority of market place.

Carbon/Graphite is the material leadingly supporting the development of the key industries like electric, steel, metallurgy, and more high-end industries like semiconductor, electronics, aerospace, rockets, and nuclear. Sporting/hobby industries are also enjoying this high-property material.

For example the environmental issue, Carbon/Graphite has its ability to be coexistent with nature and environment. The importance of Carbon/Graphite in this area is thought to be highly reviewed.

The next generation power system like fuel cell is very promising to be utilized as power generators for automobiles and other mobile objects, along with the private power resources for households, buildings, offices, plants, and hospitals. The lithium batteries are no more to be inevitable material for cell phones and lap-top computers.

Carbon/Graphite is already having its position as one of the most necessary parts in these industries.

Our commitment is to develop and produce new products that may contribute to the future of the earth and the people, in cooperation with our customers, by bringing out 120% of superior potentiality of Carbon/Graphite.
